

UAS Angel Network

Connecting Emerging Aviation
Start-Ups with Capital

Who We Are

The UAS Angel Network is a collection of accredited individual investors, angel groups and seed funds focused on opportunities in the Unmanned Aerial Systems (UAS) and Advanced Air Mobility (AAM) industry. We hold bimonthly pitching events for companies seeking early-stage investment partners. Subsectors of interest include:

- Drone Service Providers
- UAS logistics
- Airspace Management Systems
- UAS Flight Safety Systems
- Unmanned Traffic Management (UTM)
- Droneports and Vertiports
- Commercialization of New UAS Technologies

The UAS Angel Network is hosted by the [Unmanned Aerial Systems Cluster Initiative](#) (UASCI), funded through a contract with the U.S. Small Business Administration.

Why We Exist

The Unmanned Aerial System (UAS) and Advanced Air Mobility (AAM) industries are accelerating the development of technologies and systems in the aviation and transportation sector in a way not seen since the 1930's. Traditional aviation business, manufacturing and workforce models are being re-imagined. The rapid expansion of the industry creates an environment not easily served by standard business development and capital resources. Start-Ups looking to take advantage of the UAS/AAM emerging markets are finding significant roadblocks as they seek to expand business and exchange knowledge. Much of this is due to the highly technical nature of the field and its relative market immaturity. The UAS Angel Network exists to help tackle some of these challenges.
